AMENDMENT

In the claims:

Please amend the claims as follows:

1-16. Canceled

- 17. (Presently amended) A method of inducing a mean ELISA antibody titer of about 1 x 10² mg/ml or more against ricin toxin or more in a subject comprising administering to the subject an amount of a chemically deglycosylated ricin A-chain.
- 18. (Presently amended) The method of claim 1, wherein the deglycosylated ricin-A chain is chemically deglycosylated by treating a ricin A-chain with a mixture of sodium metaperiodate and sodium cyanoborohydride at a pH 3.5 for 1 hour at 4 °C.
- 19. (Presently amended) The method of claim $\frac{1}{8}$, wherein the deglycosylated ricin A-chain is incompletely deglycosylated.
- 20. (Presently amended) The method of claim 19, wherein mannose and fructose are absent from the deglycosylated ricin A-chain the deglycosylated ricin A-chain contains about 50% of mannose residues present in wild-type ricin toxin.
- 21. (Original) The method of claim 17, wherein the amount is an immunogenic amount.
- 22. (Presently amended) The method of claim 21, wherein the immunogenic amount is about 0.1 μ g to about 10.0 μ g per about 20 g to about 25 g 0.01 μ g to about 100 μ g per kg of the weight of the subject.
- 23. (Previously amended) The method of claim 17, wherein two doses of the deglycosylated ricin A-chain are administered to the subject.

- 24. (Original) The method of claim 17, further comprising administering an adjuvant to the subject.
- 25. (Original) A method for providing neutralizing antibodies against ricin toxin or preventing ricin intoxication in a subject comprising administering at least two doses of an immunogenic amount of a chemically deglycosylated ricin A-chain to the subject.
- 26. (Original) The method of claim 25, wherein the chemically deglycosylated ricin A-chain is incompletely deglycosylated.
- 27. (Original) The method of claim 26, wherein mannose and fructose are absent from the chemically deglycosylated ricin A-chain.

28-39. Canceled

- 40. (Presently amended) The method of claim 17, wherein the amount of deglycosylated ricin Achain is administered in the form of a vaccine, an immunogenic composition, or a pharmaceutical composition.
- 41. (Previously presented) The method of claim 40, wherein the deglycosylated ricin A-chain is incompletely deglycosylated.
- 42. (Previously presented) The method of claim 40, wherein the deglycosylated ricin A-chain is chemically deglycosylated.
- 43. (Presently amended) The method of claim 40, wherein mannose and fructose are absent from the deglycosylated ricin A-chain the deglycosylated ricin A-chain contains about 50% of mannose residues present in wild-type ricin toxin.

- 44. (Previously presented) The method of claim 40, wherein two doses of the vaccine, the immunogenic composition or the pharmaceutical composition provides neutralizing antibodies in a subject.
- 45. (Previously presented) The method of claim 40, wherein two doses of the vaccine, the immunogenic composition or the pharmaceutical composition prevents ricin intoxication in a subject.
- 46. (Previously presented) The method of claim 40, wherein the vaccine, the immunogenic composition or the pharmaceutical composition further comprises an adjuvant.
